
Unix / Linux cheat sheet

Franck Jeannot, Montreal, Novembre 2016, H227

SLES - Suze	Red Hat - Centos	HPUX	Solaris
-------------	------------------	------	---------

▽ Numéro de version détaillé de serveur

▽ *Server Release info*

cat /etc/SuSE-release	cat /etc/redhat-release	uname -r;swlist HPUX*OE*	cat /etc/release
--------------------------	----------------------------	-----------------------------	------------------

▽ Type de serveur

▽ *Server type*

dmidecode	dmidecode	uname -a	/usr/platform/`uname -i`/sbin/prtdiag -v
-----------	-----------	----------	---

▽ Mémoire

▽ *Memory*

cat /proc/meminfo	cat /proc/meminfo; cat /proc/slabinfo; free -om	dmesg grep -i physical	/usr/platform/`uname -i`/sbin/prtdiag -v; prtconf grep -i mem
-------------------	---	-----------------------------	---

▽ Gestionnaire de packages

▽ *Packages manager*

zypper	yum; rpm -ivh	swlist; swinstall	pkginfo; pkgadd
--------	---------------	-------------------	-----------------

▽ Lister les drivers

▽ *list device drivers*

cat /proc/devices	cat /proc/devices	lsdev	prtconf -D ; sysdev
-------------------	-------------------	-------	---------------------

▽ Analyse réseau

▽ *Network analysis*

tcpdump -i <interface>	tcpdump -i <interface>	tcpdump -i <interface>;nettl -start; nettl -status all	snoop -d <interface>
---------------------------	---------------------------	---	-------------------------

▽ Routeur par défaut

▽ *Default router*

/etc/sysconfig/network/	edit /etc/sysconfig/network	/etc/rc.config.d/netconf	/etc/hostname.hme0
-------------------------	-----------------------------	--------------------------	--------------------
